

Rundfunkanstalt Südtirol starts their live operation with the virtualized DCM from Synamedia integrated by **BOSS BROADCAST Manager™**

Once again, our BOSS BROADCAST Manager (BBM) Umbrella Management and Monitoring System ensures that a radio and television broadcaster reaches the next groundbreaking technology level: Italy's regional public broadcaster **Rundfunkanstalt Südtirol (RAS)** has gone live with Synamedia's virtualized Digital Content Manager (DCM) to prepare for the migration from DVB-T SD/HD to DVB-T2/HEVC HD services by June 2022.

BOSS BROADCAST Manager in its latest version makes a significant contribution to this by integrating a hardware DCM in addition to the virtualized Digital Content Manager, and by fully designing the hybrid technology transfer to the new premises.

The private cloud-based deployment orchestrated by BBM has allowed RAS to automate workflows and streamline operations, boosting operational efficiency with seamless use of hybrid DCM/vDCM infrastructure. BBM enables RAS end-to-end DVB and DAB+ service monitoring with a single pane of glass. Due to Dimetis BOSS STREAM Viewer™ optimized multiviewer direct communication to its umbrella management, operators gets realtime health status on all service levels, e.g. IP, Transport Stream, and A/V.

Johann Silbernagl, CTO at RAS said, “This deployment marks the beginning of our journey towards full DVB-T2 services in 2022. The powerful combination of Synamedia’s software-centric DCM solution and Dimetis’ BOSS BROADCAST Manager gives us a state-of-the-art solution that is flexible enough to meet today’s requirements while also giving us the freedom to transition seamlessly to the new standard at our own pace. As a public broadcaster, this futureproofing capability is particularly important.”

Since deploying Synamedia’s future-proof software-centric DCM solution based on BBM, RAS has the flexibility to transition smoothly to the new standards in due time. Learn more about the **BBM** and this **Success Story**.

Breaking News

BUSINESS	NAB got postponed , but the Dimetis Show will go on: Meet us at our virtual booth and benefit from our cloud based NAB demo use cases. Get in contact and see our latest evolvement.
