

BOSS BROADCAST Manager™ new Event Scheduler feature improves monetization of existing infrastructures

At Dimetis, we are known for improving network operations, especially for the broadcast market. From acquisition to playout, Dimetis has solutions to optimize and manage your networks as well as automating services utilizing the network.

Every other month in our newsletter we plan to feature a product or functionality from Dimetis that we think will be interesting for you to hear about. Did you know that with the [Dimetis BOSS BROADCAST Manager™](#), we have the “**Event Scheduler**” which is a very powerful feature to improve usability of existing resources and add additional services that perhaps you thought was impossible? This saves the huge expense of having to upgrade network infrastructure by utilizing more efficiently what you already have.

In a recent implementation that utilized Event Scheduler, a customer took their playout across different regions, was able to optimize and add more encoding streams for different programs being played out across multiple channels. With a finite number of encoders, it was possible to accurately schedule all the resources for the right channel at the right time. Which is actually harder than it sounds. It ultimately requires precise program signalling between devices and have them synchronized with the right content available from the headend. But with the BOSS BROADCAST Manager™ and Event Scheduler, it has proven integration and now allows them to do more with the same.

In addition, BOSS BROADCAST Manager™ also reduces operational overhead. By implementing automated workflows, it allows more services with the same, or even reduced staff. It has a layer of over-the-top management that can give real time monitoring ensuring status health can be viewed and any likely issues can be flagged early before they become catastrophic. The same management portal can be used to automate tasks and ensure SLA's with KPI's/KQI's are being adhered to.

Dimetis has solutions for a range of networking issues. If you are reaching maximum capacity on your network or looking at future media workflows such as UHD that requires additional capacity but without the need for upgrading or adding more resources, then please contact us for an initial discussion. We would be delighted to talk with you on what Dimetis can do for your business.

	<i>Breaking News</i>
BUSINESS	North American Tier 1 telco adds BOSS OPERATIONS Manager™ for scheduling its video contribution circuits. Streamlining their operations by workflow automation is the key to doubling their business in 2020!
TECHNICAL	Dimetis BOSS BROADCAST Manager™ was successfully deployed in a hybrid headend for linear TV services. The combined virtualized and physical compression center is now fully managed and monitored via one pane of glass.
APPLICATION	New customer in Great Britain successfully uses BOSS BROADCAST Manager™ together with Harmonic devices and management system for the use case described in this newsletter
